## Training Day 1 Report:

June 30, 2025

Prompt engineering is the process of carefully designing and structuring the input (called a "prompt") given to an AI model like ChatGPT to get the most accurate, useful, or creative output. Since large language models respond based on the way a question or instruction is written, prompt engineering involves experimenting with different ways of asking something to guide the AI toward better answers.

For example, asking "Summarize this paragraph" and "Can you give me a short version of this?" might give slightly different results. A good prompt can make the AI's response more relevant, detailed, or even more logical.

In simple terms, prompt engineering is like learning to talk to AI in its own language to get the best results. It's especially important in areas like content generation, code writing, automation, and customer support where precision matters.

## Anatomy of a great prompt

A good prompt should be clear, specific, contextual, and goal-oriented.

- Instruction What the AI should do
- Context Background or relevant information
- Format Desired structure of the output
- Constraints Any limits like tone, style, or word count
- Role The role the AI should take (e.g., teacher, coder)

This structure helps in getting accurate and relevant responses from AI models. Examples of Good vs Bad Prompts

Type	Bad Prompt	Good Prompt
Role based	Tell me something about	Act as a college professor in
	computers	computer science engineering.
		Write an intermediate-level
		introduction of computers.

Role based and COT	Why?	You are a researcher analyzing AI trends. Why AI suddenly saw such a boom in past 3-4 years. Think step by step.
Role based and constraints	Act like a person	Act like a 2nd-year CSE student with intermediate-level English.  Write an answer to this question from computer architecture and microprocessor in more than 200 words. Explain different mapping techniques.
Role based and constraint based	Write a story	You are a writer like Ruskin Bond. Write a vivid story in around 500 words about first day of a girl born in the USA visiting Punjab. Story should target readers of age 11–16 years and should be told from 1st person point of view. Make our main character a 12-year-old who is mature for her age and absorbs everything she sees.
Role based	Compare dogs and cats	Act as a vet and explain to a 3-year-old the difference between a dog and a cat in simple words, their looks, behaviour, and their ways of showing happiness, affection, and hurt in a friendly way.

Constraint based	Summarize it	Summarize this Deloitte Insights article from the link given at end using simple language in 10–15 points with clear headings and subheadings. At the end, give 3 conclusions from the article. https://www.deloitte.com/us/en/insights/topics/technology-management/tech-trends.html#what%E2%80%99s-next-for-ai
Instructional	Give me ideas	Analyze YouTube for top trending niches that won't require high investment, and give me 10 such ideas.
Role based	How to make a website?	You are a web development mentor. Give me a complete process to make and host a portfolio website as a beginner with knowledge of HTML, CSS, JS, React, with a pre-built template.
Role based	Fix this code	You are a code reviewer.  Analyze this code for any syntax or logical errors. Also suggest improvements to make this code more efficient, and add comments.
Constraint based	Draw something	Draw lotus flowers and a sun in the middle of them in Madhubani style. Keep colours vibrant, ensure symmetry.
